Driver Control Features

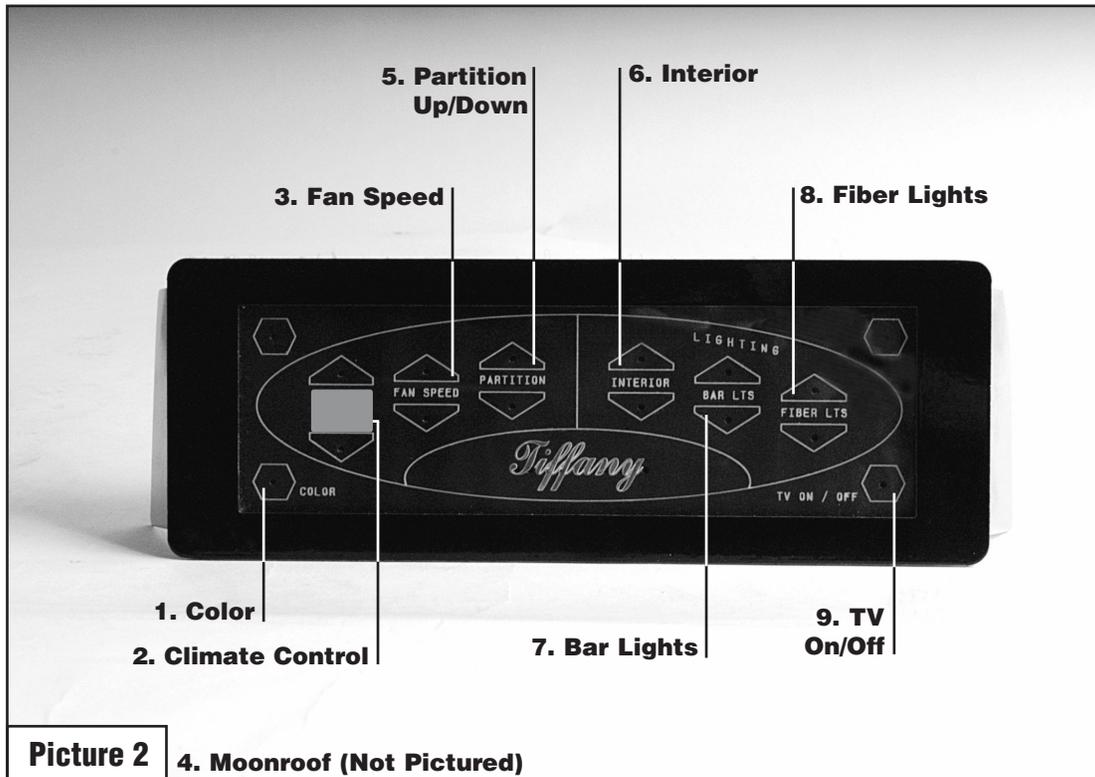

System Power

- A. Turn ignition on.
- B. After driver panel has been activated, locate the power button and activate the system.
- C. Wait 15 seconds for system to recognize controls and settings.
- D. At this time, all functions will be available to operate from driver and passenger control panels.

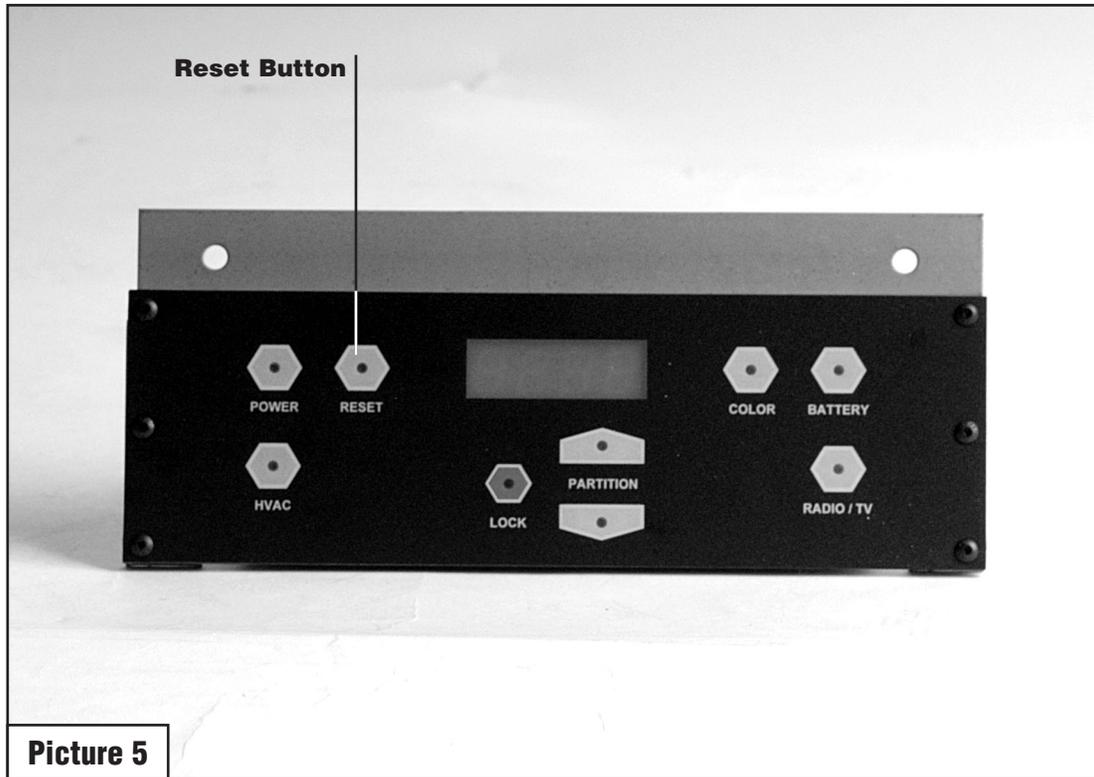

1. POWER BUTTON - Activates main power to the Limo Touch System after ignition to vehicle is on
2. RESET - Sets rear lighting system as well as TV/video and radio to the on position. This will prevent passengers from having to turn on all features manually upon entry. It also shuts down A/C system
3. HVAC BUTTON - Will reset heater and air conditioning system to heat/cool the passenger compartment to 68 degrees Fahrenheit
4. MOONROOF - If equipped with a moonroof option, (not pictured, typically located next to lock #5 Feature) the up arrow will open the moonroof and will close with the down arrow. This feature may be locked for driver control only
5. LOCK - This button will disable the passenger from using the moonroof (if equipped) and the partition. When activated, the LED light will illuminate
6. PARTITION - The partition is controlled by the up arrow to close and the down arrow to open. This feature is only available when the LED light in the up/down arrows are illuminated. This feature may be locked for driver control only
7. COLOR - When activated, the color wheel for the side light fiber optics stops with the current color displayed
8. BATTERY - If the ignition is on, this button enables the factory limo battery and the aftermarket limo battery to combine power to potentially jumpstart the engine or jumpstart Limo Touch
9. RADIO/TV - The rear radio and TV are disabled when this feature is activated by the driver

Passenger Control Features

1. COLOR - The control panel offers 4 colors for better visibility. You may select from red, white, blue, and green to allow for better visibility and mood if desired. Press this button to scroll through the color choices
2. CLIMATE CONTROL - The number in the LED display shows desired temperature in the passenger cabin. The up arrow increases temperature while the down arrow decreases temperature
3. FAN SPEED - The ventilation/fan speed may also be increased or decreased by selecting the appropriate arrow. This feature ranges from F0 (off) to F5 (max speed)
4. MOONROOF - If equipped with a moonroof option, (not pictured) this feature is located adjacent to partition and operates in the same manner
5. PARTITION - Use the up arrow to close and the down arrow to open the partition. This feature is only available when the LED lights in the up/down arrows are illuminated. This feature may be locked on the driver control for driver use only
6. INTERIOR - Interior lighting may be dimmed, brightened, or shut off by selecting the up arrow to brighten and the down arrow to dim and/or turn off
7. BAR LTS - Bar lights may also be dimmed, brightened, or shut off by selecting the up arrow to brighten and the down arrow to dim and/or turn off
8. FIBER LTS - Side light fiber optic lights may be dimmed, brightened, or turned off by selecting the up arrow to brighten and the down arrow to dim and/or turn off
9. TV ON/OFF - This button disables/enables the video screens when pressed

Clock Setting

Setting the Clock on the Driver's Control Panel

1. First, turn the vehicle ignition on.
2. With the Limo Touch System on, hold the RESET button until a second series of beeps are heard.
3. Using the PARTITION up and down arrows, select the minutes and hour on the clock display.
4. After the desired time has been set, press the RESET button to exit time set mode.
