

## How to compare our light's curvature to your vehicle.

With our template printed, open either front door and hold the template to the door edge at the height of where the lights will be mounted. Following these instructions you will know if the vehicle curvature and our light curvature is a match or not. For this vehicle the light had more curvature and did not match. If the lights were installed you can see in the picture there will be a gap in the middle.

**Model 200 and 230**
